

“KELITE”
B **BRITISH-MADE**
LOW and
RAZING LAMPS.

The Kitson-Empire Lighting Co., Ltd.,
STAMFORD, Lincs., Eng.

THE “KELITE”
British Brazing and Blow Lamps.

PRIOR to the War the manufacture of Brazing and Blow Lamps was a monopoly in the hands of the Huns and their friends the Swedes. With a view of assisting in capturing our enemy's trade, we are now manufacturing the most serviceable types of such lamps in order to satisfy the demands of our own people.

Needless to say, our lamps are made entirely by British labour, from British material in every part.

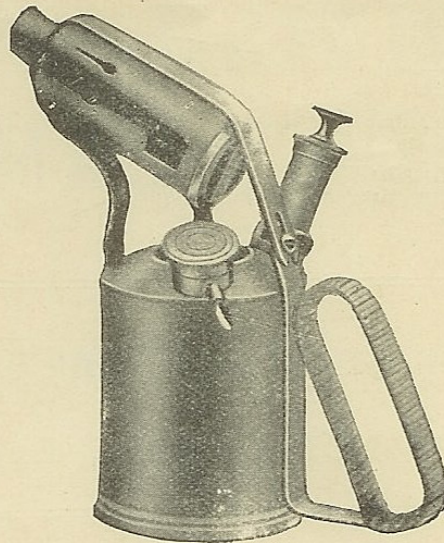

These lamps are made with the best material and workmanship, and are equal to anything that has yet been placed on the market.

We hope our fellow-countrymen will assist us in helping to drive alien goods off the British market, and to keep them off.

A Word of Warning.

MANY serious accidents have happened from the bursting of brass containers when employed for Blow Lamps and Stoves. So far we have never heard of a single accident where Steel Containers are used. For this and other reasons **we recommend Steel Containers for Blow Lamps and Oil Stoves in preference to brass.** The "Kelite" Oil Stoves and Blow Lamps, unless otherwise ordered, are provided with Steel Containers carefully tinned inside and outside to prevent corrosion, and we guarantee this will not occur. **They are recognised as the safest, strongest, and most durable ever placed on the market.** Where desired the Steel bodies are given an Electro-brass finish which renders them as attractive in appearance as genuine brass. Hence they combine the strength of steel with the polish of brass. Each Lamp and Stove is tested to four times the maximum pressure to which it will be subjected when in normal use. **"Kelite" Oil Stoves and Blow Lamps are Fool-proof. The "Kelite" Oil Stove is the easiest to light and the cheapest to maintain of any other.**

THOUSANDS ARE IN USE
ALL OVER THE WORLD.
